The Original

## Skin protection involving easy and pleasant application

MARLY SKIN® is applied to the skin area in need of protection which should be dry and free of grease.

- wash hands or skin and dry well before applying
- shake the can well before use
- hold the can with the spray nozzle down
- spray foam on skin area needing protection (use a walnut-sized amount for your hands)
- Rub evenly and thoroughly into the skin; do not forget to rub in between the fingers and on the cuticles. For optimum distribution, it is advisable to remove jewelry (such as rings).
- Let dry for three minutes after applying. The skin is now protected for four to six hours even if the skin is washed with soap and water or disinfected several times throughout. All natural functions such as perspiration, respiration, and sense of touch are unaffected during this time.

MARLY SKIN® is neither visible nor otherwise noticeable. It is perfectly harmless when it comes in contact with the eyes, mouth or food and leaves no marks behind.

Ingredients:  
AQUA, BUTANE, STEARIC ACID, PROPANE, SORBITOL, TRIETHANOLAMINE, PROPYLENE GLYCOL, GLYCERIN, DIMETHICONOL, TOCOPHERYL ACETATE, METHYLPARABEN, PROPYLPARABEN, BISABOLOL

## Reliable skin protection

MARLY SKIN® meets the requirements for effective and long-term skin protection while maintaining ideal physiological conditions.

- absorbs immediately and is not visible or noticeable on the skin
- suitable for use on the whole body (including the face)
- easy and clean to handle
- no material abrasion, no occlusion
- non-greasy and does not smear
- no impairment to sense of touch
- economical to use
- natural skin functions such as breathing and perspiring are unaffected
- 4-6 hours of skin protection, even if hands are washed and disinfected multiple times throughout this period
- no removal necessary, resolves itself without any residue
- completely harmless if in contact with food

## Professional skin protection

Daily, frequent hand washing and disinfecting and coming into contact with aggressive and noxious substances used in industry pose permanent stress to the skin.

To that, add occlusion from wearing gloves which prevents skin respiration and perspiration. This softens the protective outer layer of the skin and allows noxious substances to penetrate. Unpleasant skin irritations such as redness, scaling, swelling, or even allergic reactions may result.

## The revolutionary skin protection principle

For more than 20 years, millions of applications around the world have confirmed extensive dermatological and clinical evidence of efficacy.

MARLY SKIN® implements a unique skin protection principle which is formed after applying a protective film that *penetrates the skin* instead of covering it, thereby preventing it from being subject to abrasion (such as with creams and ointments). The result is highly effective protection against contaminants and irritants –

*like a second skin!*

For all occupations involving contact with substances which are harmful and irritating to the skin:

- metal work  
(e.g. cooling lubricants, oils/fats, resins)
- wood working  
(e.g. solvents, paints, adhesives)
- ceramic and glass industry  
(e.g. cooling lubricants, dye dissolvents, thinners)
- construction  
(e.g. products containing cement, coating materials, concrete)
- chemistry  
(e.g. acids, alkalis and solvents, resins)
- printing  
(e.g. inks, solvents)
- agriculture and horticulture  
(e.g. fertilisers, pesticides)
- food industry  
(e.g. disinfectants, cleaning agents)
